- Load limiting device
- Hexagonal section extensions
- Independent extension cylinders
- Flanged valves
- Assembly kit
- Designed in accordance with: EN12999-DIN15018
- Fatigue test classification: B3
- Oil tank
- Fixed stabilizer cylinders
- Mechanical rotation limitation (CE)
- Dual controls (No with radio remote control)
- Manually opening stabilizers

- Limiteur de moment
- Extensions à section hexagonale
- Vérins hydrauliques à sortie indépendante
- Vannes bridées
- Kit de brides de fixation
- Projet en accords aux normes: EN12999-DIN15018
- Essai de fatigue avec classification: B3
- Réservoir huile
- Vérins stabilisateurs fixes
- Limitation mécanique de la rotation (CE)
- Commandes bilatérales (Non avec radiocommande)
- Stabilisateurs élargissables manuels

- Momentbegrenzer
- Sechskantige Ausschübe
- Unabhängige Schubzylinder
- Ventile mit Flansch
- Befestigungsteile
- Berechnungsnorm nach EN12999-DIN15018
- Ermüdungstest in Klasse: B3
- Ölbehälter
- Feste Abstützungen
- Mechanischer Schwenkbegrenzer (CE)
- Beidseitige Kransteuerungen (Nicht mit Funkfernsteuerung)
- Manuell ausfahrbare Abstützungen

## Stability control systems (CE)

### HXL System

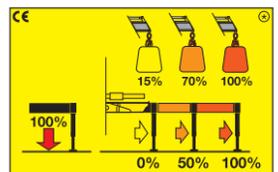

The TCU checks the positions of the stabilizers beams, monitoring for two possible positions: beam fully open, beam not fully open. Depending on the position of the beams and the stabilizers, the crane's lifting capacity changes according to the setting made by the installer. This allows the operator to use the crane even with a beam partially or fully retracted without having stability problems.

### Optional HRCS

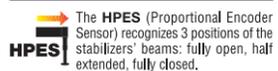

The Rotation Control Sensor constantly checks the slewing position of the crane and limits the lifting capacity depending on the beams' and the stabilizers' positions.

### H2XL System

The TCU checks the positions of the stabilizers and divides the working area into 4 slewing sectors: over the cabin, right side, left side and the rear of the vehicle. Depending on the position of the beams and the stabilizers, the crane's lifting capacity changes according to the settings made by the installer. This allows the operator to use the crane even with a beam partially or fully retracted without having stability problems.

The HPES (Proportional Encoder Sensor) recognizes 3 positions of the stabilizers' beams: fully open, half extended, fully closed.

The CAN-BUS radio-control allows the operator to know the positions of the stabilizers and the loading conditions of the crane.

With manual opening stabilizers, the H2XL System only recognizes completely open or completely closed beam positions.

© The percentages present in the pictures are merely examples and they have no bearing on the crane's real lifting capacities. The crane's real lifting capacities will depend on truck's stability.

## EES Extra Extension Speed

A special regenerative valve re-uses oil during extension, ensuring an incredibly high speed without compromising the safe operation of the crane.
